

## General Description

The MAX2209A is a wideband (800MHz to 2 GHz ) RF power detector. It takes an RF signal from the directional coupler at the input, and outputs a DC voltage proportional to the RF peak voltage. The change in output voltage versus temperature is very repeatable from part to part and enables a lookup table based on nominal behavior, minimizing the effective detection error to less than $\pm 0.5 \mathrm{~dB}$ relative to room temperature.

The MAX2209A comes in a space-saving $2 \times 2,0.5 \mathrm{~mm}$ pitch UCSP ${ }^{\text {TM }}$.

Applications
Dual-Band WCDMA Handsets
High-Speed Downlink Packet Access (HSDPA) High-Speed Uplink Packet Access (HSUPA)

Features

- -25dBm to -5dBm Power Detection Range
- $\pm 0.5 \mathrm{~dB}$ Detection Error Due to Temperature
- +2.7V to +5V Single-Supply Operation
- Space-Saving 4-Bump, 1mm² UCSP Package
- Shutdown Control
- 140ns Step-Response Time

+Denotes a lead(Pb)-free/RoHS-compliant package

## RF Power Detector with Shutdown Control

## ABSOLUTE MAXIMUM RATINGS

| Junction-to-Ambient Thermal |  |
| :---: | :---: |
| Resistance ( $\theta \mathrm{JA}$ ) ( Note 1) | $335{ }^{\circ} \mathrm{C} / \mathrm{W}$ |
| Operating Temperature Range ....................... $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ |  |
| Storage Temperature Range......................... $65^{\circ} \mathrm{C}$ to $+160^{\circ} \mathrm{C}$ |  |
| Junction Temperature .............................................. $150^{\circ} \mathrm{C}$ |  |
| Bump Temperature (soldering, Note 2) |  |
| Infrared (15s). | $+260^{\circ} \mathrm{C}$ |
| Soldering Temperature (reflow) | $+240^{\circ} \mathrm{C}$ |

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a 4-layer board. For detailed information on package thermal considerations, refer to www.maxim-ic.com/thermal-tutorial.
Note 2: For detailed information on soldering, refer to Application Note 1891: Wafer-Level Packaging (WLP) and Its Applications.
Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Caution! ESD SENSITVE dEVICE

## DC ELECTRICAL CHARACTERISTICS

$\left(\mathrm{VCC}=2.7 \mathrm{~V}\right.$ to 5.0 V , no RF signal applied, $\mathrm{T}_{\mathrm{A}}=-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$. Typical values are at $\mathrm{VCC}=2.8 \mathrm{~V}, \mathrm{~T}_{\mathrm{A}}=+25^{\circ} \mathrm{C}$, unless otherwise noted.) (Note 3)

| PARAMETER | CONDITIONS | MIN | TYP | MAX | UNITS |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Supply Voltage |  | 2.7 |  | 5.0 | V |
| Supply Current |  |  | 3.9 | 6 | mA |
| Idle Output Voltage |  |  | 35 |  | mV |
| Output Current Source Capability | PIN $=-5 d B m$, Vout forced 100 mV lower than opencircuit output voltage | 1000 | 2300 |  | $\mu \mathrm{A}$ |
| Output Current Sink Capability | PIN $=-25 \mathrm{dBm}$, Vout forced 10 mV higher than opencircuit output voltage | 75 | 150 |  | $\mu \mathrm{A}$ |
| Shutdown Current | VSHDN $=0 \mathrm{~V}$ |  | 25 | 50 | $\mu \mathrm{A}$ |
| SHDN Logic-High | $\mathrm{V}_{\mathrm{IH}}$, including $2 \mathrm{k} \Omega$ resistor | 1.2 |  |  | V |
| SHDN Logic-Low | $\mathrm{V}_{\text {IL }}$, including $2 \mathrm{k} \Omega$ resistor |  |  | 0.45 | V |
| Turn-On Time | SHDN transitions to $\mathrm{V}_{\mathrm{IH}}$, Vout is within $90 \%$ of final value (Note 4) |  | 1.5 | 2 | $\mu \mathrm{s}$ |
| RF Step-Response Time | RF transitions from $<-25 \mathrm{dBm}$ to -5 dBm , VOUT is within $90 \%$ of final value, $1 \mathrm{k} \Omega+10 \mathrm{pF}$ load (Note 4) |  | 140 | 200 | ns |

## RF Power Detector with Shutdown Control

## Detailed Description

The MAX2209A power detector is designed to operate from 800 MHz to 2.0 GHz . The device is ideal for wideband code-division multiple access (WCDMA), cdma2000®, and high-speed downlink/uplink packet access. The MAX2209A accepts an RF signal at the input, and outputs a temperature-independent voltage related to the input signal power. The output voltage expressed in dBV is proportional to the input power expressed in dBm. The device has a detection range from -25 dBm to 0 dBm .

## Applications Information

The typical application circuit, as taken from the MAX2209A EV Kit, is shown in Figure 1. The IC can be shut down by forcing the RFIN/SHDN DC voltage low through a $2 \mathrm{k} \Omega$ resistor. The output of the detector goes to an ADC for further processing by the baseband system. Connect a series resistor and shunt capacitor to the MAX2209A output to reduce residual amplitude ripple. The series resistor should not be less than $1 \mathrm{k} \Omega$.

EV kit gerber files, schematic, BOM, and updates are available on the MAX2209A product page at Maxim's website (www.maxim-ic.com).

## Layout

There are two areas that require attention: the GND pin and the supply bypassing. Connect the GND pin to the PCB ground with a GND via as close as possible, and bypass VCC to ground with a capacitor as close as possible to the part.
